Analytics Practice

From raw transaction data to a scaled analytics business

DATA PLATFORM

PROBLEM STATEMENT

GROWTH STORY

Analytics Lifecycle Management Cycle

Case Study1 : User transaction data aggregation platform

One record set that brings four account types into a single customer view

Bank accounts	Credit card transactions	Mortgage accounts	Brokerage accounts

What analytics problems can we solve with this data?

Amount	Merchant	User ID	Bank ID	Transaction Type	Date	Transaction Description
₹2,499.00	Amazon India	U1001	HDFC001	Purchase	2026-08-01	`AMAZON MKTPL*7K4P9X2M1`
₹1,850.00	Indian Oil	U1002	SBI001	Purchase	2026-08-01	`INDIAN OIL #45218 BHUBANESWAR`
₹642.00	Swiggy	U1003	ICICI001	Purchase	2026-08-02	`SWIGGY*ORDER 784521903`

PROBLEM STATEMENT

How do we grow a $5M data business into a $50M+ one?

The brief handed to the incoming Chief Analytics Officer

A company holds this kind of transactional data for 30 million customers across the United States, and current revenue from that data is around USD 5 million. You have been appointed Chief Analytics Officer — how would you transition this into a USD 50 million+ business?

30 MILLION

USD 50M+
target to reach

Submit your answer

HOW IT HAPPENED

Three moves that grew the data business

Enrich the data, invest in analytics, then reposition it as alternative data

Transaction data enrichment

Extract structured meaning — merchant, category, location — from raw transaction records.

Analytics investment

Test a wide set of hypotheses to find which signals hold commercial value.

Alternative-data positioning

Serve hedge funds, retail siting, income and geographic distribution, and credit use cases at a higher price.

REVENUE BY SEGMENT

How GenAI is Changing BA

The tools, agents and analytics reshaping the business analyst toolkit

TOOL LANDSCAPE

AGENTIC ANALYTICS

APPLIED SKILLS

THE SHIFT

Analytics is moving from a destination to an interaction.

The question is no longer “which dashboard?” It is “what do you want to understand?”

TRADITIONAL BI

Find the dashboard.
Filter the view.
Interpret the chart.

GENAI-ENABLED BI

Ask the question.
See the reasoning.
Decide what to do.

“Why did South India revenue decline in Q2?”

THE TRANSFORMATION

Five changes that reshape the analytics workflow.

The valuable shift is deeper than adding a chatbot to a dashboard.

BEFORE		AFTER	WHY IT MATTERS
Dashboard-centric	→	**Conversation-centric**	Ask a business question in plain language.
User knows what to look for	→	**AI helps discover what matters**	Surface anomalies, drivers and next questions.
Manual query creation	→	**Natural language -> query**	Generate SQL or analysis steps, then review.
Human interprets charts	→	**AI explains insights**	Translate metrics into a business narrative.
Mostly descriptive	→	**Predictive / prescriptive**	Move from what happened to what could happen next.

Framing based on the public Gartner abstract: “How GenAI Is Transforming Analytics and Business Intelligence Platforms,” June 12, 2025.

WHAT CHANGES ON MONDAY MORNING?

The analyst keeps the judgment. AI absorbs the mechanics.

A useful mental model: AI compresses the path from question to evidence.

01 → 02 → 03 → 04 → 05

Frame

Business question

Generate

SQL / code / chart

Check

Definitions + evidence

Explain

Drivers + anomalies

Act

Recommendation + follow-up

The new differentiator is not output speed. It is trustworthy context.

ANALYTICS IN ACTION

The real value is the investigation, not the chatbot.

One business question can activate the full chain: intent -> query -> evidence -> explanation -> next action.

“Why did South India revenue decline in Q2, and what should we investigate next?”

Agentic Analytics

01

Skills

Reusable capabilities, invoked on demand

02

Agent

Goal-driven execution across multi-step tasks

03

MCP Servers

Standard connectors into your systems

04

RAG based agent

Answers grounded in your knowledge base

Together these shift the analyst from running the analysis to directing it.

Turn scattered customer signals into one investment view

- SUPPORT
- COMPLAINTS

COMMON TAXONOMY

cluster • quantify • map

REUSABLE VOC SKILL

01 PAIN POINTS

Themes ranked by frequency and severity

02 DSAT

Contribution by segment and journey

03 IMPACT

Potential reach and customer value

04 ROADMAP

Investment areas and uncovered gaps

PM VALUE — **A prioritized, evidence-backed view of customer problems**

Make the monthly review a pipeline, not a fire drill

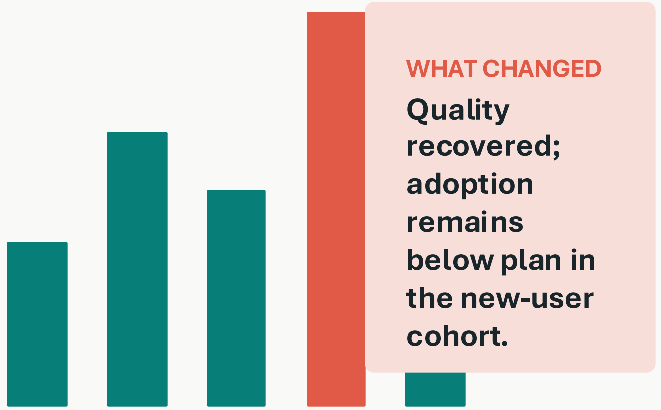
LIVE SIGNALS

- Adoption
- Reliability
- Quality
- Revenue
- Customer health

KPI REVIEW AGENT

1. Pull current metrics
2. Explain movement
3. Flag anomalies
4. Draft the narrative

MONTHLY BUSINESS REVIEW



review-ready deck

Reusable skills: DATA → STORY | EXECUTIVE NARRATIVE | DASHBOARD → SLIDE | KPI REVIEW

Put a cross-functional review panel inside the document workflow

FEATURE SPECIFICATION

PROBLEM	Who experiences it, and how do we know?
OUTCOME	What measurable behavior should change?
SCOPE	Requirements, guardrails, and exclusions
DECISION	Trade-offs, owner, and open questions

PM

Outcome clarity
Prioritization

UX

User journey
Accessibility

ENG

Feasibility
Failure modes

STRATEGY

Differentiation
Second-order effects

The agent does not replace approval. It raises document quality before scarce human review time is spent.

Connect customer evidence to a governed backlog decision

01
CUSTOMER FEEDBACK
tickets • calls • reviews

02
THEME EXTRACTION
cluster and summarize

03
IMPACT SCORING
reach • severity • confidence

04
ADO WORK ITEM
bug • feature • investigation

05
PRIORITY RECOMMENDATION
value • effort • risk

GOVERNANCE GATES
- ✓ evidence link
- ✓ duplicate check
- ✓ PII handling
- ✓ human owner
- ✓ acceptance criteria

More than a prompt: this is an AI-assisted PM operating system with traceable inputs and accountable decisions.

Let every conversation leave behind a useful, updated artifact

KNOWLEDGE AGENT

extract • route • draft • update

DECISION RECAP

Decision • rationale • owner

WORKSTREAM UPDATE

Progress • risks • next step

EXECUTIVE EMAIL

Signal first • concise ask

PLANNING DOC

Actions and status updated

ANNOUNCEMENT

Audience-ready narrative

ESCALATION

Context • impact • aircover

The durable advantage is continuity: decisions, actions, and context move together instead of being recreated in every channel.

LLM Council Response Process

Collect first opinions

The user query is given to all LLMs individually and responses are collected in a tabview.

Review and rank

Each LLM reviews anonymized responses from others and ranks them by accuracy and insight.

Compile final response

The Chairman of the LLM Council compiles all model responses into a single final answer.

INTERVIEW PREP

Interview Preparation

Topics to master across analytics, statistics and machine learning
